The Counter

This is and remains the eye-catcher of your library. You welcome your users here and also say goodbye. In future library concepts, too, the counter will play a central role. A counter has high functional, ergonomic and design demands and thereby underlines the statement of a modern workbench in the information age: this is a place from people for people.

Our new System Counter INFORM is informative: not only through friendly personnel, but also with the help of integrated presentation modules. Folder cabinets enable an organized presentation of event tips, presentation cabinets show new acquisitions.

INFORM is on form: its modular construction allows a very individual adaptation to functional and design requirements, as well as to architectural conditions. You will be able to reconstruct and add on, today and in years to come. You may sit or stand, can electrically adjust your ideal working height, and can book via RFID.

INFORM is fit for a new generation of service-oriented libraries.
INFORM is a modular piece of furniture. Straight and rounded elements can be used as single counters or may be randomly combined. The special design of the table tops and side walls create a continuous surrounding frame which unites the single elements into an expressive optical unit. You can combine modules in seating height (740 mm) and standing height (1000 mm). Elements with electro-engine provide continuous height-adjustment.

Table tops 800 mm deep and 40 mm thick as well as side walls frame the back-leaping wooden fronts with closed base boards. Alternatively, there are wooden fronts with bag trays available or acrylic glass fronts with indirect light upon request. Stability is gained under the counter by reset metal feet with special consideration of the required legroom.

Your individual scope of design and functional requirements is well supported by accessory options such as counter screens, counter top parts, bag trays, cabinet and presentation modules, office containers, computer consoles, cable channels and monitor arms.

Counter working tops, side walls and fronts from wood, veneered/plastic coated. Base boards height-adjustable in the middle, wood with stainless steel appearance, reset metal feet, lacquered.

www.lammhultslibrarydesign.com
INFORM's rectangular modules form the basis for a straight design. A single counter itself is already an ideal solution for small rooms. Our rectangular counter can be combined with corner counter, circle segment counter, advisory counter, lift counter and the complete accessory programme. Combining different heights for seating and standing is possible with our step counter from page 11.

2 x rectangular counter in combination with folder cabinet; see page 14
Corner Counter

True comfort and more freedom of move

The monitor is a central part of the booking counter. A monitor arm definitely improves the required functions at the counter. You will have more freedom to work and will gain space on the working top. The monitor is easily adjustable and can also be turned towards the client.

A special drilling for the cable conduct will be made to ensure a reliable installation. Thereby all cables will run under the counter top, and if required, the monitor arm can also be removed and exchanged against our standard cable conduct outlet.

Timo Mildenberger, product development

In combination with the corner counter we create an appealing angle-shaped system. There is no optical interruption of the front, and the integral design with the continuous frame will be kept.

For combination with rectangular counter, advisory counter.

90° Circle Segment Counter
You are looking for an angle-shaped counter in L-shape and want to use the corner space between the two sides for a complete and ergonomic workstation? This is the perfect application for the 90° circle segment and its qualities! Also in combination with other circle segment counters, rectangular counters, advisory counters, lift counters and cabinet modules.

Combining different heights for seating and standing is possible with our step counter from page 11.

45° Circle Segment Counter
Make a profit from the verve of your furniture. The 45° circle segments can be easily combined and each offers a spacious workplace, but they can additionally be supplemented by rectangular counters, advisory counters, lift counters and cabinet modules. Adding several elements in a row creates a large, bent arc which will put a remarkable, formal emphasis even in large rooms.

Combining different heights for seating and standing is possible with our step counter from page 11.

Advisory Counter

Your focus on advice requires people which exude openness and who show communicative skills. Also does this apply for furniture. Our advisory counter enlarges your work area by a short table element. This will support you when inviting to small discussion groups and will convey the visual impression that you are deeply involved in your users’ questions and wishes.

Lift Counter

Changing from seating to standing while your work is good for your health. Both ways have their advantages:
We are comfortable and concentrated while sitting. Standing discharges our back, we are at eye level with our customers, keep eye contact and are much flexible to move in physical work and when handling books.

With our electro-driven lift counter and its continuous height adjustment, it is now up to you to decide how you want to work and to simply push the button for the desired height between 680 mm and 1180 mm. Even if you decided for a complete standing counter, our lift counter modules will give you the advantage to adjust the individual working height for each workstation separately. This will also apply for a counter at seating height. Besides all these general ergonomic features, our lift counter is particularly distinguished by its very safe and customer-oriented functional design.

It comes as a double construction with a closed, height-adjustable body which is framed by a second ground-touching enclosure and thereby excludes possible safety risks such as squashes or bruises in a reliable manner.

A customer-oriented attachment which is integrated into the module can be used as bag tray or as prominent presentation for folders and media.

Why not vary your working heights? INFORM offers the possibility of combining seated and standing work in one counter system. Through this change option, these variations offer a standard seated workplace on the one hand and on the other, the employee will be at eye level with the user while booking or advising.

---

**Counter Top Part**

When you are interested in concentrated work and where the handling of media is secondary, a counter top part is the perfect and sensible supplement to a rectangular counter. The top part was designed for single use as well as for additions. An additional height of 260 mm adds up to a standing counter height of 1000 mm.

This is the perfect way of connecting counter top parts on seating counters to standing counters (see pic.).

Veneered wood/plastic coated
Variable Furnishings

Counter Screen
A screen structures the counter, shows you where to go and can also hide cables. The picture shows a width of 600 mm, but there are also larger screens available which have more effect and offer a larger labeling area. The screens can be individually attached to the wooden fronts of rectangular counters, but cannot be combined with bag trays. SchulzLabelingService upon request, H 430 mm.

Counter Top Part with Screen
Comparable to the counter screen, the counter top part also structures the counter system and points directly to the point of contact. Additionally this practical solution offers a surface at standing height where you can make notes. And here is one essential advantage for those who like experiments: this counter top part will be fixed to the counter by double-sided tape and can be varied individually later. The picture shows a width of 600 mm, but there are also larger screens available which have more effect and offer a larger labeling area. The screens can be individually attached to the wooden fronts of rectangular counters, but cannot be combined with bag trays. Veneered wood/plastic coated. SchulzLabelingService upon request, H 490 mm, insert height 235 mm.

Counter Top Part with Bag Tray
One top part – three functions: screen, top part, bag tray! The presented width of 1000 mm is variable. Using wider or smaller top parts will create totally different effects. The counter top part with bag tray can be individually attached to the fronts of rectangular counters. It will be firmly screwed to the counter board and cannot be combined with front bag trays. Veneered wood/plastic coated. SchulzLabelingService upon request, H 490 mm, insert height 235 mm.

Decorative Boards
For the individual design of your counter front, INFORM offers decorative boards which can be randomly applied to the wooden fronts of rectangular or corner counters. This is also an easy way for retrofit labelling or attaching colour accents. Veneered wood/plastic coated. SchulzLabelingService upon request

Folder Cabinet
Here is our combination-friendly module with double function. A stage to the front, a cabinet at the back! It has insert shelves at the front which provide perfect hold for loose folders, but also books or DVDs can be placed there. The cabinet structures the counter and offers practical additional surface while standing. The cabinets come with different heights and widths and can be directly integrated into rectangular counters, circle segment counters and lift counters. The body is open to the back or can be equipped with lockable doors. Veneered wood/plastic coated.

1 set for 1 drawer | 1 ea. additional divider

Drawer Equipment for AV Media Cabinet
For a variable organization of the drawer with four mobile dividers, grooved rubber mat and two separating bars from stainless steel for approx. 200 CDs with standard cover or approx. 1000 CDs with protection sleeve.

Metal dividers, silver lacquered. H 80 mm

Presentation Cabinet
Do you prefer presentation options at the front or would you rather like storage space at the back? Our presentation cabinet offers you both. The front-side shelf boards are flexible in adjustment as with the RATIO shelves, and can also be slanted for presenting your new acquisitions. DVDs, too, can be placed in the multimedia tub or multimedia manger.

The cabinets with different heights and widths are ready for direct integration into rectangular counters, circle segment counters and lift counters. The body is open at the back and can be additionally equipped with lockable doors. Veneered wood/plastic coated.

Total depth 875 mm, usable depth 580 mm. Shelf boards and other accessories D 250 mm can be chosen from the RATIO product planner.

Showtime!
We believe in the future of libraries as a place of encounters. Also books will continue to play an important role there. New books have to stand out – that’s what makes a library. And of course, the perfect place would be near the booking counter. Why not directly on the counter? And your users are curious to learn in your library what goes on in your town and country. Show it by using the integrated folder cabinets of INFORM. And the best about it: space which you use for presentation towards the front is available as additional storage space or work area at the back.
Hartmut Michalke, product management

Book Trolley Garage
Clear up behind your counter and give your book trolley its own parking space. You will not even loose space when applying the double function with additional media presentation towards the customer.
The front-side shelf boards are flexible in adjustment as with the RATIO shelves, and can also be slanted for presenting your new acquisitions. DVDs, too, can be placed in the multimedia tub or multimedia manger.
Our book trolley garage can be directly combined with rectangular counters, circle segment counters and lift counters. The body is open at the back for parking a book trolley. Insert height max. W 920 mm, D 585 mm, H 1080 mm. Veneered wood/plastic coated.
Total depth 875 mm, usable depth in cabinet 580 mm.
Shelf boards and other accessories D 250 mm can be chosen from the RATIO product planner.
